Dear Sirs:

Enclosed please find our application for a hazardous waste storage permit, Part A.

As a generator of relatively small quantities of hazardous waste (6 - 8 dr/90 days), it has become increasingly difficult to fulfill the 90 day storage limitation in a cost effective manner. When the regulations were issued, we believed that the 90 day allowance was sufficient to arrange for off-site disposal of our wastes. This has proved unworkable. Other alternatives were considered (e.g., brokers), but entailed an undesired risk of not maintaining sufficient control over final disposal of our wastes.

A hazardous waste storage permit will allow us to accumulate a quantity of waste which will make cost effective, environmentally sound handling of our waste stream more feasible, while continuing to operate an environmentally safe facility.

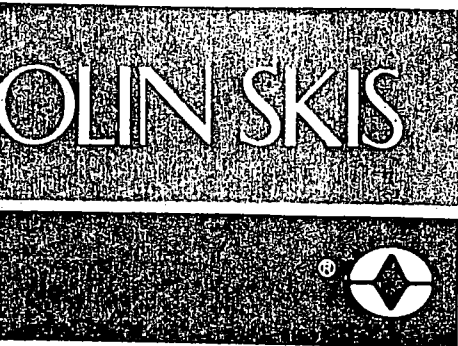

If there are any questions, please do not hesitate to contact us.

Sincerely,

T.N. Fahey
Safety Engineer

SECTION X

EXISTING ENVIRONMENTAL PERMITS

- Item E. 1. Conn. Air Pollution Control Equipment Registration
No. 0104229
2. Conn. Air Pollution Control Equipment Registration
No. 01040225
3. Conn. Air Pollution Control Equipment Registration
No. 01040224

SECTION XI

ADDENDUM

As indicated on the topographical map, there are only three bodies of surface water within a quarter mile radius, Sawmill Brook and the two small ponds identified as Pond A and Pond B. Additionally, to the best of my knowledge, there are no wells or springs of public record within that area. There are, however, two private homes located by letters C and D which have private drinking water wells.
